

Medication Guide Instructions of Custom Formulary

26711 Northwestern Highway, Suite 400 :: Southfield, MI 48033-2154 :: 800-311-3446 :: 248-948-9900 :: www.ehimrx.com

Note: *This formulary is subject to change without notice in accordance with Industry updates and modifications.*

Formulary Disclaimer: This document is intended to serve as a formulary guide to identify the most commonly utilized medications and the formulary tier they are assigned to in this custom formulary design. This formulary guide is only as current as the creation date listed above and medications may be added or deleted as new drugs are introduced to the market, drug statuses change, price modifications occur, or any other industry changes that would impact medications included in the formulary. Formulary medications and tier assignment are based on clinical effectiveness, safety and opportunity for cost savings. This custom formulary will assist in maintaining the quality of care for members in addition to cost containment for the Plan Sponsors. Prior Authorization may be necessary in order for some of the medications listed below to be covered. In these cases, clinical criteria based on current medical information and approved by the EHIM P&T Committee must be met before coverage is approved. This formulary is subject to change at any time and subject to FDA regulations and recommendations up to and including any future withdrawals from the drug market.

Notes: If Plan Sponsor is subject to PPACA, EHIM's standard list of PPACA medications would apply, even if specific PPACA medications are not listed in the formulary tiers below. If Plan sponsor elects to include EHIM's OTC program, approved over the counter (OTC) medications would be covered, even if not specifically listed on the formulary below.

The Custom Formulary is divided into major therapeutic categories for ease of use. Drugs are identified according to whether they are Generics (Tier 1); Preferred Brands (Tier 2); Non Preferred Brands (Tier 3) and/or to the extent applicable Non-Preferred Brands (Tier 4).

Tier 1: These drugs have a proven record of safety and effectiveness and offer the best value for members. Because they are Tier 1, they require the lowest co-payment, making them your most cost-effective option for treatment. Most generic drugs are listed in Tier 1 as are a number of brand medications.

Tier 2: Our Tier 2 drugs also have a record of safety and effectiveness but are more costly than Tier 1 alternatives. Traditionally, Tier 2 drugs are Brand name drugs.

Tier 3: These drugs are not considered the best clinical value as compared to Tier 1 and Tier 2. In many cases, a generic or less costly alternative is available; therefore drugs listed in Tier 3 require a higher co-pay.

Tier 4: Tier 4 drugs are excluded from coverage. There are medications available in Tier 1, Tier 2, or Tier 3 that are most cost effective and are therapeutically equivalent.

PPACA: Preventative Care Medications including Contraceptives, Smoking Cessation and Aspirin/Iron Supplements are included at a \$0.00 copay as part of the Patient Protection Affordable Care Act.
